

U.S. EPA is Sampling the Water Wells at the West County Road 112 Superfund Site

During the week of November 29 to December 3, 2010, U.S. EPA's contractors on the West County Road 112 Superfund Site will be working to sample private water supply wells without existing filtration systems between West County Road 110 and West County Road 125, and between South County Road 1207 and South County Road 1192. The wells selected for sampling are based on existing information concerning well locations and the return of signed access agreements with the property owners. During this week, the Texas Commission on Environmental Quality will also be sampling those private wells with existing filtration systems within the same area.

For specific information regarding the sample schedule for individual wells without existing filtration systems, please contact Luis Vega with EA Engineering, Science, and Technology, Inc. at 214-280-9031. For more information about the overall West County Road 112 Superfund Site, please contact Vincent Malott (EPA project manager) at 1-800-533-3508 (toll-free) or 214-665-8313 (direct line). For information concerning the filtration systems installed on private supply wells, please contact Dani Sattman Soule (TCEQ project manager) at 1-800-633-9363 (toll-free) or 512-239-0158 (direct line).
